Preflight project - backend

Github Repo

Backend applications

- Data storage
- Business logic
- Authentication / authorization
- APIs for frontend frameworks (depending on architecture)
- Connection to other services

Node JS backend frameworks

- Github stars
- State of JS 2024

Packages

- npm init es6
- Express JS
 - o pnpm i express cors helmet morgan debug
- Typescript
 - pnpm i typescript @tsconfig/node-lts @tsconfig/node-ts tsx tsc-alias
 - pnpm i -D @types/cors @types/express @types/debug @types/morgan @types/node cross-env nodemon
- ORM
 - pnpm i drizzle-orm postgres dotenv
 - pnpm i -D drizzle-kit

Package explanation

Package	Details
express	Express (duh!)
helmet	Set default HTTP response header
cors	Enable Cross-origin resource sharing (CORS)
morgan	HTTP request logger
debug	Debugging utility
nodemon	Script monitoring during dev

ORM code

- All files in ./db folder.
 - No need to copy migration folder.
 - You can change schema.
- .\drizzle.config.ts (Link)

Files

- 🖁 ./.env (Copy from here)
- 🖁 ./nodemon.json (Link)
- 🖁 ./.gitignore (Link)
- 🖁 ./tsconfig.json (Link)
- 🖁 ./.npmrc (Copy from here)
- Scripts in package.json (Link)

Minimal example

- 🖁 ./src/index.ts (Link)
- Sync database (if you have not done so)
 - o npm run db:push
- Start dev
 - npm run dev

Full example

- 🖁 ./src/index.ts (Link)
- Build
 - o npm run build
- Start production
 - npm run start

API Spec

- Insomnia
- Postman

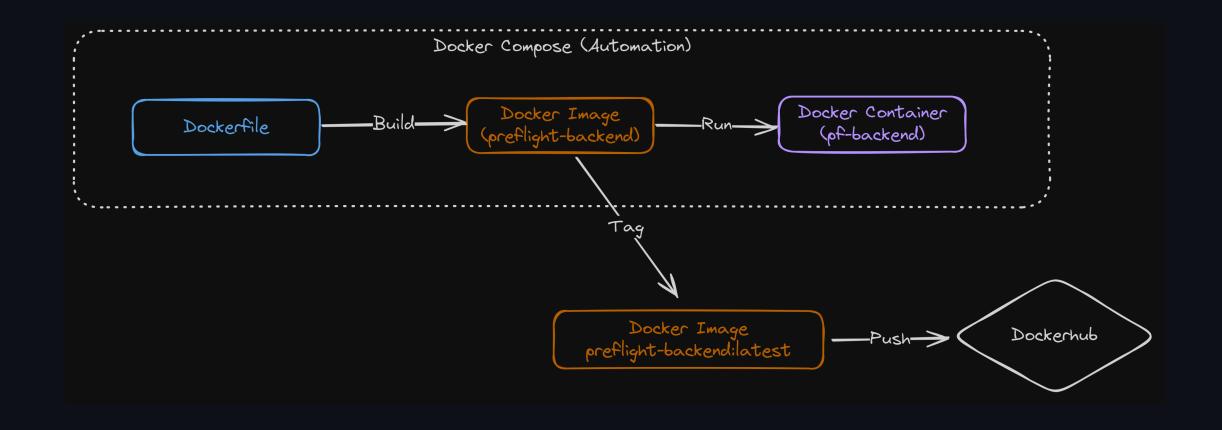

Debugging (optional)

• 🖁 ./.vscode/launch.json (Link)

Migration

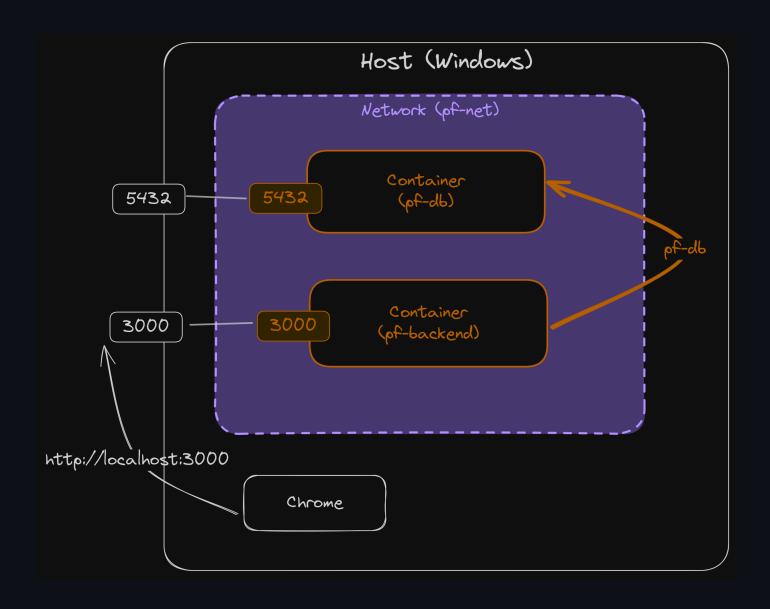

- Run before the containerization step.
- npm run db:generate

Containerization

Steps

- 🖁 ./Dockerfile (Link)
- 🖁 ./dockerignore (Link)
- 🖁 ./docker-compose.yml (Link)
- 🖁 ./.env.test from ./.env.test.example (Link)
- docker compose --env-file ./.env.test up -d --force-recreate --build

Automated database migration

- We want to make sure that database migrations are run automatically every time the container starts.
- We use the post_start hook in docker-compose.yml

Dockerhub

- Create an account at https://hub.docker.com.
- Create repository called preflight-backend.
- Login to your account in terminal
 - docker login -u [DOCKERHUB_ACCOUNT]

Push to Dockerhub

- Tag image
 - o docker tag preflight-backend [DOCKERHUB_ACCOUNT]/preflightbackend:latest
- docker login
- Push image
 - docker push [DOCKERHUB_ACCOUNT]/preflight-backend:latest

Userful docker commands

Inspect

- o docker ps
- o docker network ls
- o docker volume ls

Cleaning

- docker image prune -a
- o docker builder prune
- o docker volume prune
- o docker network prune
