Fullstack Development

Preflight project - deployment

Github Repo

Local machine

Clear your dev environment

- Remove all containers
- Remove volumes
  - `docker volume prune -a`
- Remove all image cache
  - `docker image prune -a`

Setup

- `git clone https://github.com/fullstack-68/pf-deploy.git`
- Follow `README.md`

Remote server

Setup

- Repeat steps we just did on local machine

Congratuations!

Recap

Topic	Stack
